

SUMMARY

Computer Science undergraduate (B.E., 2023-2027) with hands-on experience building full-stack SaaS applications and AI-integrated platforms using Next.js, React, TypeScript, FastAPI, and Python. Delivered multiple end-to-end projects spanning document processing, CRM systems, and multilingual AI voice tools, with practical exposure to PostgreSQL, Docker, REST APIs, and machine learning libraries (PyTorch, HuggingFace). Skilled in cloud deployment, data analysis (NumPy, Pandas, EDA), and software architecture, seeking to contribute strong problem-solving abilities to a software engineering team.

EDUCATION

Vidyavardhini's College of Engineering and Technology Mumbai, India
BE (Computer Science and Engineering) 2023 – 2027

SKILLS SUMMARY

- **Full-Stack Development:** Next.js, React, TypeScript, FastAPI, PostgreSQL, Docker, Git/Github
- **Data Science:** Python, Pandas, NumPy, Matplotlib, SQL, Exploratory Data Analysis
- **AI / Machine Learning:** PyTorch, Hugging Face, OpenAI/Groq APIs, Machine Learning, Deep Learning, NLP

WORK EXPERIENCE

Artificial Intelligence Intern | SmartED Innovations (Remote) May 2025 – August 2025

- Completed comprehensive training in AI/ML fundamentals and key Python data science libraries (NumPy, Pandas, Matplotlib).
- Built and deployed MarketLens, a full-stack stock market analysis tool applying EDA, Decision Tree classification, and K-Means clustering on a 1,000+ row dataset, combining a Streamlit ML app with a Next.js landing page.
- Gained hands-on experience by building several Python-based projects throughout the internship program.

PROJECTS

MaxTools | maxtools-three.vercel.app | 2026

- Designed and enhanced a full-stack SaaS PDF and file processing toolkit with real-time document manipulation and a cloud-based storage pipeline.
- Implemented PDF merge, split, compress, and sign functionality alongside AI-powered document summarization and a workflow automation builder.
- Reduced multi-file processing time by 80% using batch processing and background job queuing with BullMQ and Redis.
- Built batch processing with instant file download, enabling seamless end-to-end document management for users.
- Technologies: Next.js 16, React 19, TypeScript, PostgreSQL, Prisma, BullMQ, Redis, Cloudflare R2, OpenAI API, Clerk, pdf-lib, Tailwind CSS, Vercel

FreelanceHub CRM | freelance-crm-sem5.vercel.app | 2024

- Designed and expanded a full-stack client relationship management platform with real-time project tracking and a secure cloud-based data pipeline.
- Built comprehensive client dashboards, task and workflow management, and real-time database updates for seamless freelance business operations.
- Enabled real-time updates across 50+ concurrent client sessions using Supabase's real-time database subscriptions.
- Technologies: Next.js 14, TypeScript, Supabase, Tailwind CSS, Vercel

SoundStudio | github.com/siddhesh3940/TTS | 2025

- Improved a full-stack multilingual AI voice platform supporting text-to-speech, voice cloning, speech-to-text, audio editing, and real-time voice translation across 25+ languages.
- Blended multiple AI models (Microsoft Edge TTS, OpenVoice V2, MeloTTS, Meta SeamlessM4T v2) into a FastAPI backend with a React frontend; implemented subprocess isolation to resolve ML framework dependency conflicts.
- Built a client-side audio editor using the Web Audio API, incorporated a Groq-powered AI chatbot, and containerized the full stack with Docker and Docker Compose.
- Technologies: FastAPI, React 18, OpenVoice V2, MeloTTS, SeamlessM4T v2, Groq API, Docker, Web Audio API, PyTorch, HuggingFace Transformers

CERTIFICATES

- JP Morgan Chase & Co. – Software Engineering Job Simulation (2025)
- Microsoft – Cloud Computing (2025)
- Klic MKCL – C (August 2022), C++ (September 2022)
- Infosys Springboard – Java Essentials (2024), Python Programming (2025)
- Oracle – OCI 2025 AI Foundations, OCI 2025 Data Science (2025)
